
Transmitters

Pressure transmitters providing a standardised 4-20mA output signal by utilising a ceramic diaphragm strain gauge mounted with an amplifier in a stainless steel housing.

The DIN43650 connector plugs into the transmitter, eliminating the need for soldering thus making field interchangeability an easy operation.

Temperature compensated sensors are fitted as standard to automatically correct zero and span drift.

PTx Pressure Transmitters can be supplied with hygienic fittings for food applications or with diaphragm seals for use on corrosive, viscous or crystallising fluids.

- Stainless steel construction
- Pressure ranges up to 400 bar
- DIN43650 plug for easy installation
- Choice of process connections
